Abstract

Explanations of leisure travel must account for people's social contacts. To analyze this influence, transport planning employs the methods of social network analysis. While earlier projects focused on isolated personal network components, this survey study collected data on connected personal networks by taking a snowball sample.

The dataset includes information on the respondents' characteristics (e.g. their socio-demographics and their mobility biography) on their social contacts' characteristics (e.g. their socio-demographics) on the relationship between respondents and the social contacts (e.g. in which context and when they met first and how they stay in contact), and on the relationship the social contacts have amongst each other. Directly surveyed information are accompanied by variables which were calculated indirectly. Most of these information are related to people's social networks (e.g. how dense these networks are or how central the actors are). In addition to information on personal networks the dataset includes information on the population-wide Swiss leisure network.

Range of Valid Data Values: 1 to 9153

Summary Statistics:

Variable Format: numeric

Variable: ID for ego-node. All Excel_IDs are unique. In case a node participated as an ego and was mentioned as an alter too, it has one unique Excel_ID, which is included in E_Excel_ID and A_Excel_ID. Excel_IDs inform about the iteration of the snowball sample a node belongs to: Excel_ID < 999: Seeds (Iteration 0); Excel_ID >= 1000 & Excel_ID <= 9999: Iteration 1; Excel_ID >= 10000 & Excel_ID <= 99999: Iteration 2; Excel_ID >= 100000 & Excel_ID <= 399999: Iteration 3; Excel_ID >= 400000 & Excel_ID <= 499999: Iteration 4; Excel_ID >= 500000: additionally mentioned alter (from an ego who mentioned more than 40 alters, which was the limitation of the name generator)

Range of Valid Data Values: 194 to 1142

Summary Statistics:

Minimum : 194

Maximum : 1142

Variable Format: numeric

Variable: ID for alter-node

Range of Valid Data Values: 31 to 600318

Summary Statistics:

Minimum : 31

Maximum : 600318

Variable Format: numeric

Variable: ID to merge alter-node with alter-characteristics (010_Data_Alter)
